

Main.java	Run	Output
<pre>1 public class Main { 2 public static void main(String[] args) { 3 String firstName = "John "; 4 String lastName = "Doe"; 5 String fullName = firstName + lastName; 6 System.out.println(fullName); 7 } 8 } 9</pre>		<pre>John Doe === Code Execution Successful ===</pre>

Explanation:

I made a “firstName” box and put “John ” inside, then made a “lastName” box and put “Doe” inside.

I combined them into a new box called “fullName”, and then asked Java to print what’s inside.
