

Main.java	Output
<pre>1 public class Main { 2 public static void main(String[] args) { 3 String name = "John"; 4 System.out.println("Hello " + name); 5 } 6 } 7 8</pre>	<pre>Hello John === Code Execution Successful ===</pre>

Explanation:

I told Java: “Say hello to whoever is inside the ‘name’ variable.”

Java looks inside, finds "John", and prints: **Hello John**
