

Main.java	Run	Output
<pre>1- public class Main { 2- public static void main(String[] args) { 3 int myNum = 15; 4 myNum = 20; // myNum is now 20 5 System.out.println(myNum); 6 } 7 } 8</pre>		<pre>20 === Code Execution Successful ===</pre>

Explanation:

I gave “myNum” a starting value of “15”, then later changed my mind and said, “No, wait, make it 20.” When Java prints it, it shows the updated value.
