

Main.java	Run	Output
<pre>1 public class Main { 2 public static void main(String[] args) { 3 System.out.print("Hello World! "); 4 System.out.print("I will print on the same line."); 5 } 6 } 7</pre>		<pre>Hello World! I will print on the same line. === Code Execution Successful ===</pre>

Explanation:

I'm telling Java to say two things, but instead of taking a breath between them (like pressing Enter), I tell it to just keep talking on the same line. That's what "print()" does.
