```
Main.java                              Share    Run

1  public class Main {
2      public static void main(String[] args) {
3          // This is a comment
4          System.out.println("Hello World");
5      }
6  }
7
8
```

Output

```
Hello World

=== Code Execution Successful ===
```

Explanation:

I wrote a message to myself (the comment), and Java just skipped over it and printed "Hello World" like I asked.
